

## SNOW REMOVAL GUARDRAIL

Installing a snow chute will improve the safety of snow removal operations on your roof. By creating a dedicated area to push snow off the roof, workers will be safe and the snow will end up where you choose!

### FEATURES

- 100% non-penetrating
- Removable or movable intermediate rail
- Standard height (42"/1070 mm) or customized to the height of your parapet
- 10-year warranty
- Made in Canada
- Complies with the standards of the National Building Code (NBC)

Can be adapted to your need or integrated into a project. Contact us for more information!

## MANUAL HOISTING AREA

If you need to hoist material to the roof manually, it is essential that your workers are safe. An area dedicated to manual hoisting configured to your needs will therefore be essential!

### FEATURES

- 100% non-penetrating
- Front overhang and length according to your needs
- Optional toe board
- 10-year warranty
- Made in Canada
- Complies with the standards of the National Building Code (NBC)

Can be adapted to your need or integrated into a project. Contact us for more information!
